

e-xciting

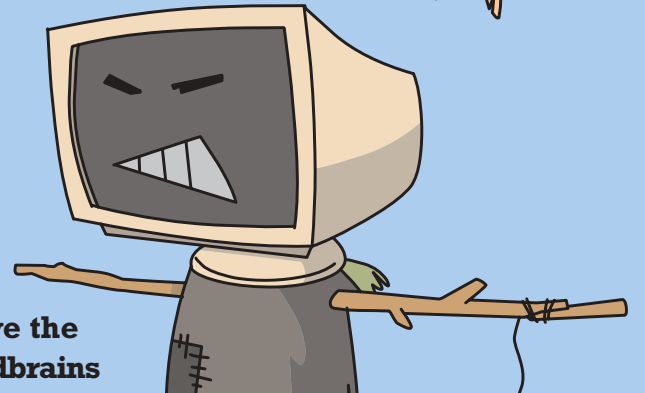

WAYS TO DEAL WITH

e-waste

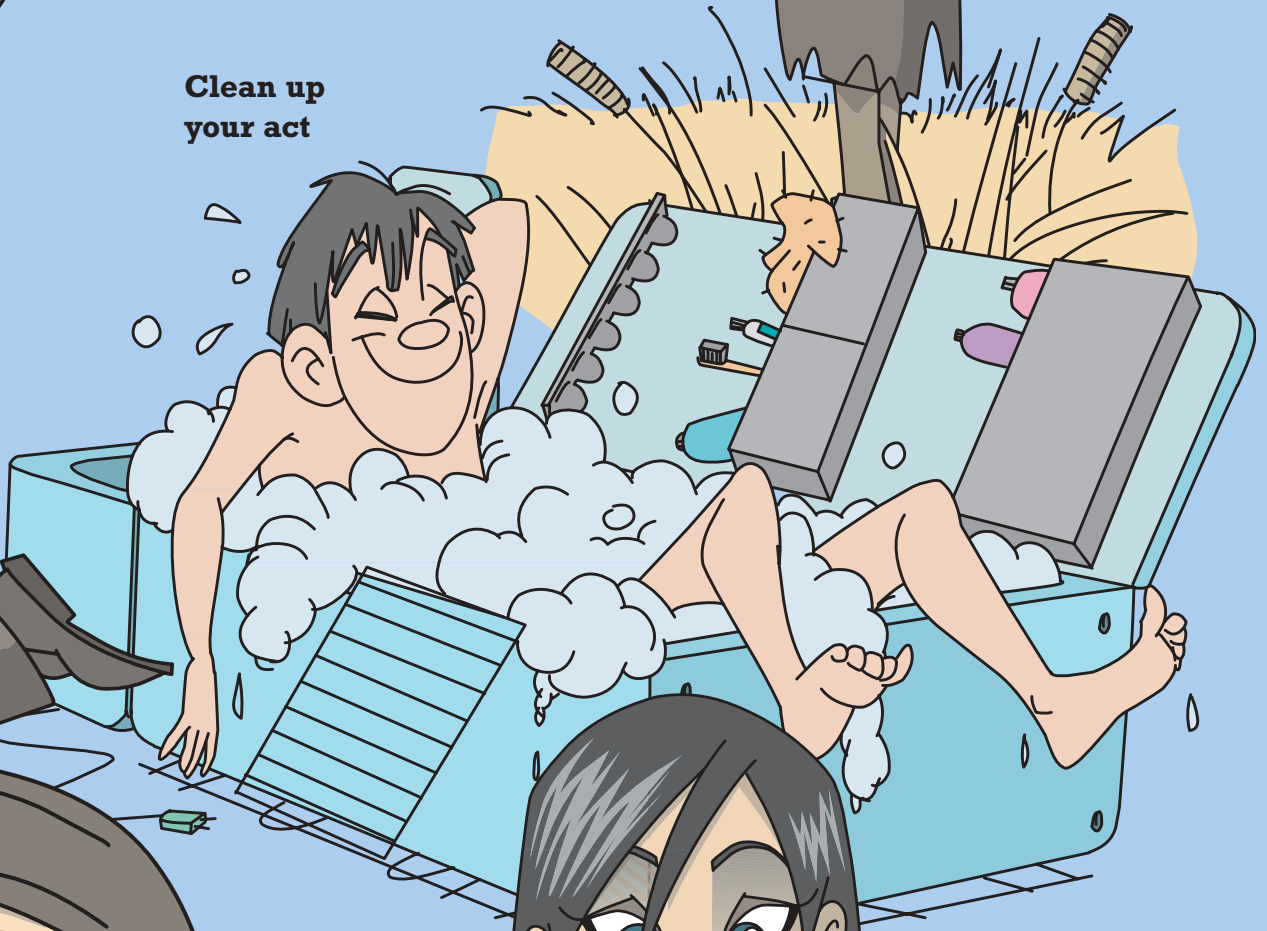

Come up with a proposal

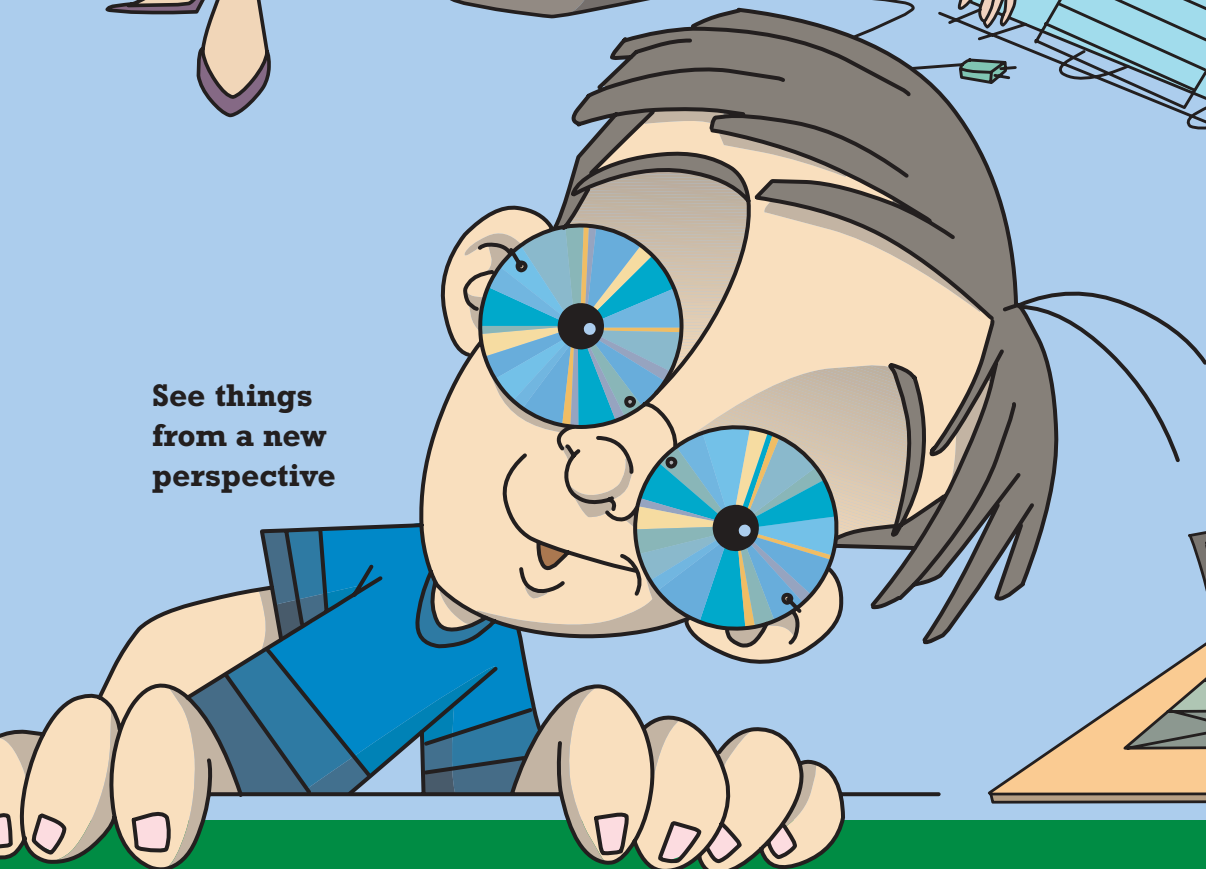

Give the birdbrains a scare

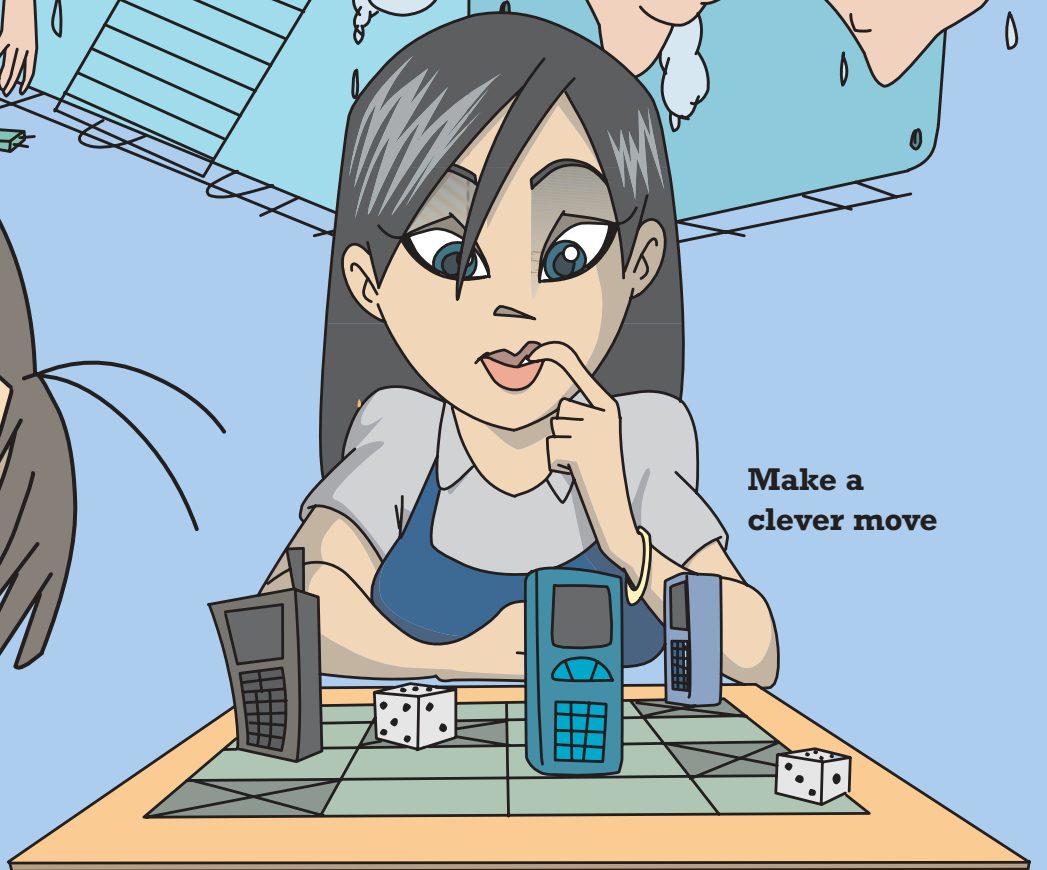

Clean up your act

See things from a new perspective

Make a clever move

Electronics and electric appliances contain some extremely hazardous substances which are released when the product is improperly recycled or disposed off. Till proper mechanisms are in place, the only way to keep the environment and yourself safe is to re-use e-waste in innovative ways.

- @ Use electronic products for longer
- @ Return used electronics to the manufacturer
- @ Campaign for a better e-waste policy
- @ Don't throw away electronic products. Pass them to friends

Don't tr@sh it. Reh@sh it.
