

Save The Planet From e-waste menace

Be The Change!!

Manage your E-waste responsibly

E-waste is end-of-life electrical and electronic equipment. It is dangerous because it contains a cocktail of toxics - Lead, Mercury & Cadmium to name just a few.

What should I do?

Reduce e-waste by using products longer. Maintain them properly and Upgrade rather than buy new.

Reuse old electronics by passing them on to friends, relatives or to those in need.

Recycle e-waste safely by giving it to only authorized E-waste Recyclers. Don't dispose e-waste to a local Kabaddiwala or scrap dealer.

What more I can do?

Spread this message to friends, neighbours and colleagues

Check if your employer has an **E-waste disposal policy**. If not, try to introduce it.

Ask the retailer for **greener products** the next time you buy electronics.
